

# LIEBHERR

## **Advanced/Classic**

## R 926 Litronic

Operating Weight: 24,800 - 28,300 kg Engine Output: 130 kW / 177 hp Engine Output:
Bucket Capacity: 0.95 - 1.55 m<sup>3</sup>

#### **Performance**

Thanks to its innovative Advanced excavator system technology, the R 926 Advanced crawler excavator has performance features that are truly unique. Characteristic elements of this system technology include the particularly effective and energy-efficient Positive Control twincircuit hydraulic system, which was specifically designed for machines with a high level of superimposed functions and operational movements. The electronic pump control arrangement sets this technology apart, creating a new standard for performance and quantity control that entirely matches the operator's needs.

## Reliability

Liebherr provides customers with solutions that lead the way for the future, solutions for maximum equipment reliability and availability, solutions which satisfy the most extreme demands for performance and quality. With more than 50 years experience in the construction of hydraulic excavators, we have an advantage in design and consultation that clearly sets us apart.

#### Comfort

In the cab the driver can look forward to a workplace designed in accordance with the very latest findings in ergonomic science, with emphasis on comfort and ease of operation. The optimised arrangement of the hydraulic hoses means that the driver has en even wider field of vision, and the heating and climate control system fitted as standard means pleasant working conditions inside, whatever the weather. Liebherr crawler excavators are also particularly easy to service – maintenance tasks can be carried out easily and rapidly at readily accessible service points.

#### **Economy**

Crawler excavators from Liebherr guarantee maximum productivity. The optimum interplay of hydraulics and electronics means that individual movements and superimposed movements alike can be carried out particularly efficiently. And, perhaps last but by no means least, the perfect harmonisation of all the components means that energy expenditure during operation can be kept to an absolute minimum.

## Positive Control twin-circuit hydraulic system

- Fast and precise provision of the volume flow needed, even with superimposed movements
- Load-sensitive control for harmonious operating movements
- Optimum energy utilisation

## **Performance**

Thanks to its innovative Advanced excavator system technology, the R 926 Advanced crawler excavator has performance features that are truly unique. Characteristic elements of this system technology include the particularly effective and energy-efficient Positive Control twin-circuit hydraulic system, which was specifically designed for machines with a high level of superimposed functions and operational movements. The electronic pump control arrangement sets this technology apart, creating a new standard for performance and quantity control that entirely matches the operator's needs.

## Advanced integrated excavator system technology

High-tech for high performance

Among the high-tech equipment on the Advanced version of the R 926 is the newly-developed integrated excavator system technology. This is based on the Positive Control hydraulic system, controlled by Liebherr electronics and the system software. The sensors located at strategic points on the machine form the basis for an intelligent system that allows for fast and fluent working.

Positive Control twin-circuit hydraulic system When travelling straight or in a curve, and during levelling work, the two pump circuits of the hydraulic system are separated or grouped together, as the need arises. Separation of the systems means that different consuming components can be supplied with different load pressures independently, and saving energy too. By contrast, grouping the pump circuits allows for maximum speeds with individual or superimposed movements, and that means optimum energy utilisation.

## **Power and speed**

Faster work cycles

The R 926 achieves particularly fast work cycles, thanks, for example, to the powerful slewing drive of the superstructure, the rapid slewing rates, and the creation of high slewing torque.

Advanced operating pressure

With an operating pressure of 380 bar, the R 926 Advanced achieves higher hydraulically limited load capacities and higher digging forces, of up to 151 kN, and break-out forces of up to 193 kN; perfect for more difficult operational situations such as canal or pipeline construction.

Classic operating pressure

An operating pressure of 365 bar makes the R 926 Classic fully equipped to tackle all earth moving work.

## Wide range of operational possibilities

• Large number of equipment variants

Fig. R 926 Advanced

- Versatile selection of undercarriage variants
- Broad operational spectrum, from earthmoving, to grading work, to demolition

#### Powerful Liebherr engines

- Four-cylinder diesel engines developed and manufactured by Liebherr specifically for construction machines, with system integration by means of CANBus and pump line nozzle injection system
- Efficient power output, high degree of efficiency, and long service life
- High performance output from the unit already in the low revolution range makes a major contribution to the economical operation of the entire excavator

#### Safe reliable transport

- Lashing eyes integrated into the un-dercarriage as standard make trans-port of the excavator both safe and reliable
- The lashing eyes are compatible with all conventional securing means and materials available on the market

Advanced / Classic

# Reliability

Liebherr provides customers with solutions that lead the way for the future, solutions for maximum equipment reliability and availability, solutions which satisfy the most extreme demands for performance and quality. With more than 50 years experience in the construction of hydraulic excavators, we have an advantage in design and consultation that clearly sets us apart.

#### **High stability undercarriage**

**Better force distribution** 

The new undercarriage concept of the generation 6 crawler excavators leads to increased performance with improved service life. Thanks to the connection of the middle section being extended as far as the ends of the chassis beams, known as the X-design, the forces are better distributed, which increases the service life of the undercarriage.

High performance travel drive

Thanks to its powerful travel drive, the R 926 is particularly well-suited for the transport of large loads across difficult terrain. The larger sprocket wheel reduces track vibrations and increases travel speed to 6.1 km/h, making the R 926 the fastest excavator in this class.

## **Technology with perspective**

Quality right down to the last detail

The at-a-glance layout of the hydraulic, lubrication, and electricity lines makes for optimum functional reliability and maximum availability of the unit. Best possible corrosion protection is guaranteed thanks to components and modules being final-painted and surface treated before assembly.

**ROPS** cab structure

The cab is equipped with an integrated roll-over protection system (ROPS) in accordance with ISO 12117-2, guaranteeing driver safety in any situation.

Ready for the demands of the future

The Advanced Liebherr system technology can be updated at any time by Liebherr Service personnel to a newer version, which makes it ready to meet the demands of the future and prepared for the further development of the electronic options.

#### Key technologies - Made by Liebherr

- Perfect matching of the components to construction machine operations
- Engine, hydraulic pumps, transfer gears, travel drives, slewing drives, slewing rings, and electronic components – all from the same source
- Main steel components, such as undercarriage, equipment modules, and slewing superstructure, all designed by Liebherr

#### Spare parts service

- Any spare parts required are available within 24 hours – worldwide. And that means high operational readiness of the machines, wherever, whenever
- Over 80,000 spare parts in stock at all times

#### Classic cab

- Best possible view thanks to large-scale windows
- Driver's seat can be individually adjusted and is vibration-damped
- Automatic heating/climate control as standard
- Right-hand pane without middle bar
- Closed stowage space
- Front, roof, and side window panes made of laminated safety glass
- Integrated roll-over protection system (ROPS)

## Comfort

In the cab the driver can look forward to a workplace designed in accordance with the very latest findings in ergonomic science, with the emphasis on comfort and ease of operation. The optimised arrangement of the hydraulic hoses means that the driver has en even wider field of vision, and the heating and climate control system fitted as standard means pleasant working conditions inside, whatever the weather. Liebherr crawler excavators are also particularly easy to service – maintenance tasks can be carried out easily and rapidly at readily accessible service points.

## Safe work - with a clear layout

A pleasant workplace

The entirely new design of the Advanced cab provides plenty of room, and creates a pleasant sense of space. Cab windows in the front, the roof, and on the right are made of break-resistant two-pane safety glass. The front windscreen is a two-part design and can be completely retracted. The cab meets ROPS requirements, providing the driver with even more protection.

High-resolution colour display

The 7-inch high-resolution colour display can be operated optionally as a touch-screen system or rotating/pushbutton arrangement. Thanks to its high resolution, the video-style display reproduces the image from the rear area monitoring camera in the best possible quality. It comes with versatile adjustment, control, and monitoring capabilities, and is designed to be glare-free.

Wide camera viewing field The optional rearview camera for the R 926 Advanced, with a viewing angle of more than 120°, provides a complete view of the area behind the machine.

Fully automatic climate control system

The climate control system has more than 12 adjustable nozzles for individual control of air flow, and can be operated via the display. For heating operation, the fuel-saving Econ mode is available, in which the climate control compressor is switched off.

Minimal noise and vibration

The new cab on the Liebherr crawler excavator meets the standards for noise emissions and whole-body vibrations, which makes work a pleasure.

#### Advanced cab

In addition to the equipment features of the Classic cab:

- Newly developed driver's position as standard
- Air-suspension seat with automatic weight adjustment and horizontal suspension for maximum comfort – as standard
- For optimum ease of operation and fatigue-free working, the operating consoles pivot with the seat

#### **Extremely maintenance-friendly**

- All maintenance points are easily accessible
- Daily routine servicing work can be carried out very rapidly, reliably, and in comfort
- The Advanced version comes as standard with a fully-automatic central lubrication system, and the Classic with a semi-automatic arrangement

#### **Liebherr Tool Control**

- Memory storage of up to ten tool settings (pressure and oil flow)
- Display of the designation of the add-on attachments and tools
- If the hydraulic attachment is changed, once the new tool has been chosen the system presents the programmed pressure values and oil flow volumes in the menu

# Advanced / Classic

## **Economical**

Crawler excavators from Liebherr guarantee maximum productivity. The optimum interplay of hydraulics and electronics means that individual movements and superimposed movements alike can be carried out particularly efficiently. And, perhaps last but by no means least, the perfect harmonisation of all the components means that energy expenditure during operation can be kept to an absolute minimum.

#### **Economical technology**

Costs savings thanks to fuel efficiency

Classic

**Advanced** 

Tests have shown that the new crawler excavators from Liebherr use even less fuel than the units of the previous generation. The electronic engine speed sensing control creates efficient conversion of engine output into hydraulic performance. The result: Faster and more powerful working while cutting fuel consumption at the same time; which means less stress for the diesel engine, too.

The Advanced crawler excavator is even more economical when it comes to fuel consumption. Fuel savings are achieved thanks to the integrated excavator system technology and the efficient engine and hydraulics management. When at rest, the sensor-controlled function automatically brings the engine revolution speed down to idling, which reduces fuel consumption and emission values, and helps save the environment - as well as costs.

#### Value retention

High resale value

Liebherr excavators are built to last, with top quality materials given top quality workmanship and that guarantees top value retention.

**Environmental** protection and recycling

All Liebherr engines meet the exhaust gas directives specified by law, of Stage IIIA/ Tier 3, which means reduced nitrogen oxide and fine dust emissions. This effect is supported even further by the optionally available Liebherr particle filter. With Liebherr, concern for the environment is extended to the whole machine. Up to 95 % of all the components from a Liebherr excavator can be recycled, and only lead-free paints are used.

#### Innovative tooth system

· Patented tooth system, consisting of tooth holder, tooth, securing bolts, and protective plugs

R 926 Advanced

- Teeth can be replaced rapidly and without the use of force
- Tooth shapes for every operational situation

#### Modular particle filter (optional)

- Reduction in fine dust emissions
- · Consists of intake, filter, outlet, and muffler modules
- Certified in accordance with the VERT filter list

## **Advanced**

## **Engine**

Rating per ISO 9249	. 130 kW (177 HP) at 1,800 RPM
Model	Liebherr D 934 S
Type	4 cylinder in-line
Bore/Stroke	. 122/136 mm
Displacement	
Engine operation	. 4-stroke diesel
	unit pump system
	turbo-charged
	after-cooled and fuel cooled
	reduced emissions
Cooling	water-cooled and integrated motor oil cooler
Air cleaner	dry-type air cleaner with pre-cleaner, primary and
	safety elements
Fuel tank	. 380 I
Electrical system	
Voltage	. 24 V
Batteries	. 2 x 135 Ah/12 V
Starter	
Alternator	three phase current 28 V/80 A
Engine idling	sensor-controlled
Integrated motor management	
Advanced	connection to the integrated bagger system con-
	trolling via CAN-BUS to the economical utilisation

of the service that is available

#### **Hydraulic System**

Hydraulic system	system for independent and need-based quantity allotment via the hydraulic pumps; sensor-guided. Features high system dynamics and sensibility provided by integrated system controlling
Hydraulic pump	Liebherr variable displacement pump built in transversal plate style, in parallel arrangement with integrated transfer box
Max. flow	_ 2 x 238 l√min.
Max. pressure	
Pump management	_ electronic pump management via the integrated system controlling (CAN-BUS) synchronous to the control block
Hydraulic tank	
Hydraulic system	
Hydraulic oil filter	_ 1 full flow filter (20 µm) in return line with inte- grated fine filter area (5 µm)
Hydraulic oil cooler	compact cooler, consisting of a water cooler, sandwiched with hydraulic oil cooler, fuel cooler and after-cooler cores and hydrostatically driven fan
MODE selection	adjustment of engine and hydraulic performance via a mode pre-selector to match application, e.g. for especially economical and environmentally friendly operation or for maximum digging performance and heavy-duty jobs
RPM adjustment	stepless adjustment of engine output via RPM at each selected mode
Liebherr Tool Control	_ 10 preadjustable pump flows and pressures for add-on tools

## **Hydraulic Controls**

The controlling is conducted via the integrated bagger system technology, input and output modules, communicated via the CAN-BUS with the electronic central

Power distribution \_ \_ via control valve with integrated safety valves

Travel.

Additional functions \_

Attachment and swing \_\_\_ proportional via joystick levers

 with proportionally functioning foot pedals or adjusted with a plugable lever - speed pre-selection

proportional regulation via slide switches or foot pedals

## **Swing Drive**

Advanced	shockless and antireaction
Drive by	Liebherr swash plate motor
Transmission	Liebherr compact planetary reduction gear
Swing ring	Liebherr, sealed single race ball bearing swing
	ring, internal teeth
Swing speed	0 – 11 RPM stepless
Swing torque	79 kNm
Holding brake	wet multi-disc (spring applied, pressure released)

#### **Operator's Cab**

Cab	ROPS safety cab structure (capable of sweeping over) with individual windscreens or featuring a slide-in subpart under the ceiling, work headlights integrated in the ceiling, a door with a side window (can be opened on both sides), large stowing and depositing possibilities, shock-absorbing suspension, sounddamping insulating, tinted laminated safety glass, separate window shades for the sunroof window and windscreen
Operator's seat	Liebherr-Air-Comfort seat, airsprung with automatic weight adjustment, vertical and horizontal seat damping including consoles and joysticks. Seat and armrests adjustable separately and in combination, seat heating as standard
Control system	arm consoles, swinging with the seat
Operation and displays	large high resolution colour display with self- explanatory operation via touch screen or turn- push button, video capability, versatile adjusting, control and monitoring facilities, e.g. climate con- trol, implement and tool parameters
Air-conditioning	standard automatic air-conditioning, ambient air function, fast de-icing and demisting at the press of a button, air vents can be operated via a menu; ambient air and fresh air filters can be easily replaced and are accessible from the outside; heating-cooling unit, designed for extreme outside temperatures, sensors for solar radiation, inside and outside temperatures
Noise emission	noise and estorae temporature
ISO 6396	$_{\rm L_{pA}}$ (inside cab) = 72 dB(A)
2000/14/EC	_ L <sub>WA</sub> (surround noise) = 103 dB(A)

Max. reach \* Limited by hydr. capacity The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

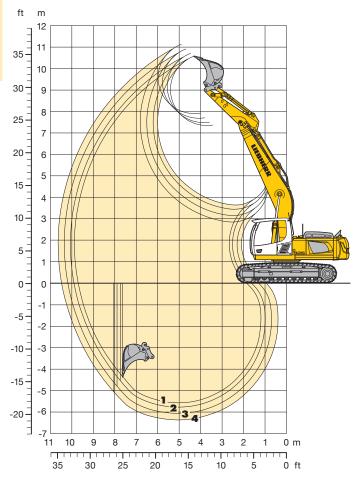

1) Values are calculated with 500 mm wide triple-grouser pads for the NLC-Undercarriage

1 Height Gan be slewed though 360° 🖺 In longitudinal position of undercarriage

## **Backhoe Attachment**

## **Advanced**

with Straight Gooseneck Boom 6.00 m

Optional: heavy duty counterweight
(Heavy duty counterweight increases the operating weight by 500 kg
and ground pressure by 0.01 kg/cm²)

Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

🖞 In longitudinal position of undercarriage 🛮 🦸

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

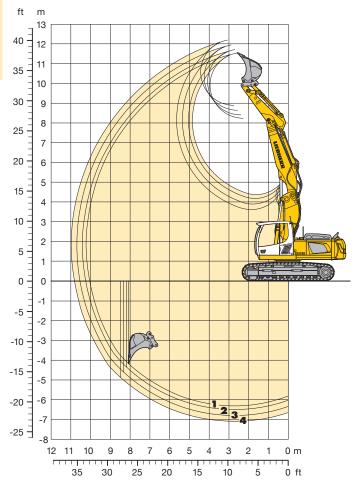

1) Values are calculated with 500 mm wide triple-grouser pads for the NLC-Undercarriage

■ Can be slewed though 360°

## **Backhoe Attachment**

## **Advanced**

with Hydr. Adjustable Main Boom 4.00 m

Optional: heavy duty counterweight (Heavy duty counterweight increases the operating weight by 500 kg and ground pressure by 0.01 kg/cm $^2$ )

Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads with adjusting cylinder in optimal position. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

In longitudinal position of undercarriage

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

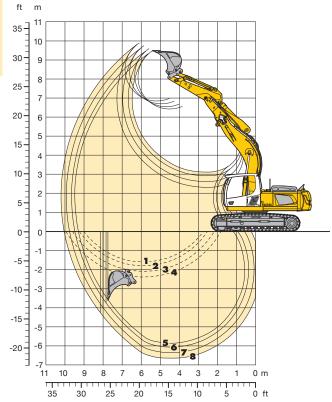

1) Values are calculated with 500 mm wide triple-grouser pads for the NLC-Undercarriage

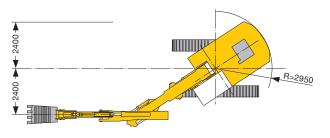

■ Can be slewed though 360°

## **Backhoe Attachment**

## **Advanced**

## with Adjustable Offset Boom 5.70 m

Optional: heavy duty counterweight (Heavy duty counterweight increases the operating weight by 500 kg and ground pressure by 0.01 kg/cm<sup>2</sup>)

Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

🖞 In longitudinal position of undercarriage 🛮 🦸

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

1) Values are calculated with 500 mm wide triple-grouser pads for the NLC-Undercarriage

Can be slewed though 360°

## Advanced

## with Gooseneck Boom 5.90 m and Heavy Counterweight

Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

🖞 In longitudinal position of undercarriage 🏽 🦸

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

**1** Height ■ Can be slewed though 360°

<sup>1)</sup> Values are calculated with 500 mm wide triple-grouser pads and heavy counterweight for the NLC-Undercarriage

## **Advanced**

with Straight Gooseneck Boom 6.00 m and Heavy Counterweight

Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

🖞 In longitudinal position of undercarriage 🏽 🦸

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

<sup>1)</sup> Values are calculated with 500 mm wide triple-grouser pads and heavy counterweight for the NLC-Undercarriage

## Advanced

with Hydr. Adjustable Main Boom 4.00 m and Heavy Counterweight

Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads with adjusting cylinder in optimal position. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

🖢 In longitudinal position of undercarriage 🏽 🦸

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

**1** Height ■ Can be slewed though 360°

<sup>1)</sup> Values are calculated with 500 mm wide triple-grouser pads and heavy counterweight for the NLC-Undercarriage

## **Advanced**

with Adjustable Offset Boom 5.70 m and Heavy Counterweight

Max. reach \* Limited by hydr. capacity 
 ♣
 Height
 Height The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads. Indi-

cated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

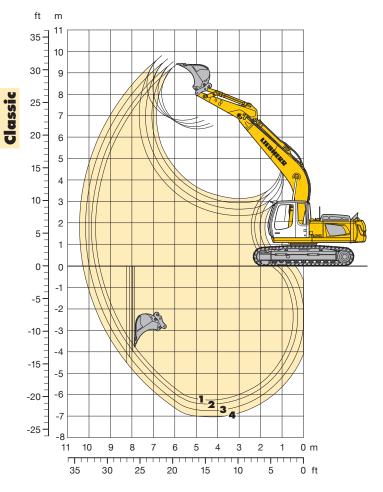

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

1) Values are calculated with 500 mm wide triple-grouser pads and heavy counterweight for the NLC-Undercarriage

Height •• Can be slewed though 360° In longitudinal position of undercarriage Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouper pads, India.

supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

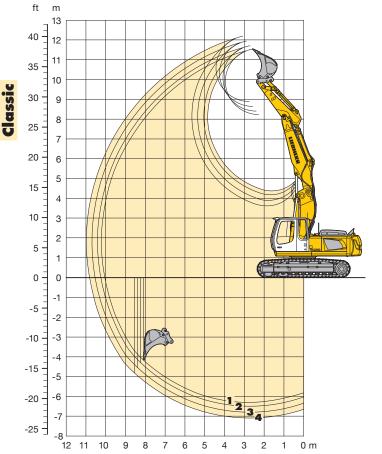

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

1) Values are calculated with 500 mm wide triple-grouser pads for the NLC-Undercarriage

Max. reach \* Limited by hydr. capacity

The lift capacities on the load hook of the Liebherr quick change adapter 48 without attachment are stated in metric tonnes (t), and can be lifted 360° on firm, level supporting surface. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 600 mm wide triple-grouser pads with adjusting cylinder in optimal position. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated by \*) or are limited through the allowed lift capacity of the load hook on the quick change adapter (12 t). Without quick change adapter the lift capacities will increase by 250 kg, without bucket cylinder, link and lever they increase by an additional 375 kg.

In longitudinal position of undercarriage

According to European Standard, EN 474-5: In the European Union excavators have to be equipped with an overload warning device, a load diagram and automatic check valves on the hoist cylinders, when they are used for lifting operations which require the use of lifting accessories.

1) Values are calculated with 500 mm wide triple-grouser pads for the NLC-Undercarriage

□ Can be slewed though 360°

# Standard Equipment Advanced/Classic

Undercarriage	Advanced	Classic
Lifetime-lubricated track rollers	•	•
Tracks sealed and greased	•	•
Track guide at each track frame	•	•
Sprocket with dirt ejector	•	•
Lashing eyes	•	•
Two-stage travel motors	•	•

Uppercarriage	Advanced	Classic
Handrails, non slip surfaces	•	•
Engine hood with lift help	•	•
Sound insulation	•	•
Maintenance-free swing brake lock	•	•
Maintenance-free HD-batteries	•	•
Lockable tool box	•	•
Tool kit	•	•

# The Liebherr Group of Companies

#### Wide product range

The Liebherr Group is one of the largest construction equipment manufacturers in the world. Liebherr's high-value products and services enjoy a high reputation in many other fields, too. The wide range includes domestic appliances, aerospace and transportation systems, machine tools and maritime cranes.

#### **Exceptional customer benefit**

Every product line provides a complete range of models in many different versions. With both their technical excellence and acknowledged quality, Liebherr products offer a maximum of customer benefits in practical application.

#### State-of-the-art technology

To provide consistent, top quality products, Liebherr attaches great importance to each product area, its components and core technologies. Important modules and components are developed and manufactured inhouse, for instance the entire drive and control technology for construction equipment.

#### **Worldwide and independent**

Hans Liebherr founded the Liebherr family company in 1949. Since that time, the enterprise has steadily grown to a group of more than 100 companies with over 32,000 employees located on all continents. The corporate headquarters of the Group is Liebherr-International AG in Bulle, Switzerland. The Liebherr family is the sole owner of the company.
