### Motion and Blade Controls

The speed ranges, machine direction changes and steering modes are controlled by the left hand joystick. Buttons control transmission gear selection, while rocker switches select high and/or low steering ranges.

Shift preset function reduces gear shifting frequency and auto-downshift function provides high productivity w/o manual downshifting.

Ergonomically designed joystick enables superb blade control. Double tilt and pitch control buttons are used for precise and easy changes of the blade position.

Ripper lever controls raise and lower of the ripper and ripper shank pitch.

120

Single-shank and multi-shank rippers are equipped with hydraulic pitch.

Wide Choice of Equipment

Semi-U, Full-U and Coal Angle dozer is designed of an angling dozer.

#### **TRANSMISSION & TORQUE CONVERTER**

Modular, countershaft type power shift, electro-hydraulic control. Preset travel speed selection and auto-downshift.

Single stage 415 mm (16") torque converter with a 2.45:1 stall ratio drives to transmission through a double universal joint.

#### **STEERING & BRAKING**

Two-speed geared steering module provides gradual turns while maintaining full power to both tracks plus conventional clutch-brake performance for tight or pivot turns. This type of steering system offers superior traction in all types of operations and terrain.

Coupled to 3-speed transmission, the 2-speed steering provides 6 speeds forward and 6 reverse. The left hand joystick controls transmission and steering drive for up and down shifting, steering, Hi/Lo selection and LH/RH gradual geared turn.

Foot pedal applies both brakes for parking and downhill control. Brakes are spring applied and hydraulically released.

#### FINAL DRIVES

Double-reduction with planetary final drive stage provides desired gear reduction at the sprocket. Eight-piece bolt-on sprocket distributes wear evenly over track bushings letting every tooth ride free one-half of the time to reduce wear. Sprocket segments are replaceable without removing track frames.

#### TRACK FRAME

All-welded heavy box section track frame is kept in alignment with track frame guides providing true vertical oscillation.

Track rollers, each side
Top idlers, each side
Front idlers (drum type)1
All rollers and idlers lifespan lubricated
