

### **DOZERS**

750J | 850J

Built with the same kind of forward thinking as our first hydrostatic dozer more than 30 years ago, 750J and 850J Dozers continue to define the way earthwork gets done. Their unique state-of-the-art Total Machine Control (TMC) enables

an operator to customize machine operation and response to personal preferences. Coupled with an uncommonly smooth full-featured hydrostatic drivetrain, the John Deere J-Series Dozers deliver unsurpassed power, control, and results. Again.

Power turns, power management, infinite speed control — we introduced them all more than 30 years ago. And today's 750J and 850J are loaded with even more productivity- and uptime-boosting enhancements.

Eleven track frames, four mainframes, and a variety of blades let you choose the right crawler configuration for your kind of work.

Tier 3-certified John Deere diesels deliver power without compromise in all conditions.

Deere's unique Total Machine Control lets an operator customize the crawler's operational characteristics and response, and even records machine usage. Standard equipped with

JDLink™ Ultimate, you have
24/7 anywhere access to your
dozer's location, utilization,
dashboard alerts, fuel consumption, diagnostic codes,
and hours. Plus geofencing,
curfew, and numerous other
capabilities.

Best-in-class service access, same-side daily servicing, and extended engine, hydraulic, and transmission oil and filter service intervals help keep downtime to a minimum.

Equipped with optional Integrated Grade Control (IGC), adding your preferred grade-control system is "plug-and-play" easy.

Independent track control speeds up or slows down each side – for smooth, full-power turns. An automatic 10-percent power boost helps carry more material in a turn.

No need to cross-steer or ride a brake. These dozers steer the same and maintain their preset speed whether working on level ground or a 2-to-1 slope.

### Maximize productivity with minimal effort.

All dozers move the earth. But if you want one that does more with a lot less effort, you'll choose a John Deere J-Series. State-of-the-art electronic controls put you in complete command of a whole arsenal of hydrostatic advantages, including power turns, counterrotation, and

infinitely variable travel speeds. What's more, Total Machine Control lets an operator customize decelerator mode and response, forward/reverse ground-speed ranges, steering modulation, and forward/reverse speed ratios. Nothing else even comes close.

Low-effort controls command the blade and a full-featured hydrostatic drivetrain, ensuring predictable response at all times in all conditions. Simply set the maximum desired ground speed and the power-management system automatically maintains peak engine rpm and power efficiency without stalling or shifting.

Infinitely variable range to 6.8 mph gives total flexibility to match ground speed to the load. Travel can also be varied to fit specific applications, terrain, or operating preferences — and even limited to maximize undercarriage life.

Purpose-built mainframes for power-angle-tilt and outsidemount blades allow optimized component placement for uncompromised grading ability. Fully modulated drivetrain ensures smooth starts and direction changes, while virtually eliminating jerky or abrupt movements.

Generous hydraulic flow and precise metering ensure powerful and quick blade response, while providing a natural "feel" that will enhance any operator's grading skills. A thumb-actuated switch provides low-effort angle control.

Retractable seat belt, slip-resistant floor mat, convenient grab bars, neutral-start lever, and automatic park brake help keep the operator out of harm's way. Deluxe suspension armchair won't cramp your operator's style. Seven-way adjustable seat provides plenty of legroom and daylong comfort. Arm- and footrests also adjust.

Ergonomically correct joystick provides intuitive, low-effort control of steering, forward/ reverse travel, and ground speed. It's detented so it doesn't require an operator's constant touch or attention, and employs a thumbactuated travel-speed switch.

Convenient 12-volt port provides power for accessories such as cell phones.

Exclusive TMC lets you customize decelerator mode and response, forward/ reverse ground-speed ranges, steering modulation, FNR shift rate, and forward/ reverse speed ratios, for unsurpassed one-of-a-kind control.

Want your operators to be more productive? Put them in the seat of this spacious air-conditioned modular cab. From their ergonomically designed fully customizable controls to best-in-class visibility, J-Series Dozers are loaded with everything you need to keep your operators cool, calm, productive — and on your payroll.

Choose the decelerator function that's right for the job. Slow both ground speed and engine rpm, or ground speed only to help maintain traction without affecting engine power and hydraulic response. Fully depressing the pedal applies the brakes.

Cab-forward design positions the operator for a more stable ride and a commanding view behind, below, and beyond the blade. Side and rear visibility is equally unobstructed. Monitor keeps a vigilant watch on vital machine functions with warnings you can see and hear.

Automotive-style directional vents deliver effective airflow to keep the glass clear and the cab comfortable. Air conditioning is standard on all cabs. For ROPS-only crawlers, an optional underseat heater helps warm the operator.

High-intensity halogen driving lights are standard. Or opt for the factory-installed 360-degree light package and extend your workday beyond normal daylight hours.

One-piece welded mainframe resists torsional stress, absorbs shock loads, and delivers maximum strength while allowing easy service access to major components. Individually replaceable wetsleeve cylinder liners provide uniform engine cooling and long-term durability. Sealed transmission connectors prevent moisture and contaminants from entering terminals: gold pins resist corrosion for increased reliability.

## Nothing lasts like a Deere, either.

Designed and built with state-of-the-art tools and techniques by a quality-conscious workforce at our world-class facility in Dubuque, lowa, the J-Series are loaded with uptime-boosting features. Enhancements include a variable-speed hydraulic-driven cooling system fan, gold-plated electrical connectors, and

extended service intervals. These, plus traditional Deere durability features such as one-piece unitized mainframes, Dura-Trax™ undercarriage, wet-sleeve engine liners, O-ring face-seal hose couplers, and isolated planetary final drives keep them keeping on. When you know how they're built, you'll run a Deere.

No need for elevated sprockets. Heavy-duty double-reduction planetary final drives are mounted independent of the track frames, where they're effectively protected from shock loads.

One-piece rigid track frames ensure long-term track alignment. Smooth idlerto-sprocket covers shed material buildup for easy clean-out. Bolt-on wear parts for the chain guides and push-beam mounts virtually eliminate difficult and time-consuming cut-and-weld repairs.

The PAT dozer's closedcell blade design and box-section C-frame deliver exceptional strength and durability. Outside-mounted dozer push beams are equally durable.

Perforations act as a "first filter," preventing entry of most debris. Anything that gets past the five-mm holes also easily passes through the cooler cores.

Unitized mainframe with flush-fit bottom guards combines with tight-fitting side shields to prevent debris from being drawn into the engine compartment.

No stacked coolers in these crawlers. Side-by-side cores with wide fin spacing reduce clogging and are easy to clean.

### Keep your cool and burn less fuel.

J-Series Dozers are designed to run cool regardless of what's in the air or underfoot. Their highly effective cooling system employs a hydraulic-driven variable-speed suction fan that operates only as needed for maximum power and efficiency.

For work in environments with lots of airborne debris, an optional reversing fan automatically back-blows to help shed debris from cooler cores and side screens. So your 750J or 850J can work long and hard without breaking a sweat.

Variable-speed fan automatically speeds up or slows down, operating only as needed to keep things cool. Helps conserve power and fuel, while reducing noise. Air isn't blown into the coolers, so engine and transmission reach operating temperatures more quickly in cold weather.

Warm fluids flow easier, helping extend component life, too.

Programmable fan automatically reverses to help eliminate cooler-clogging buildup. Or press a button on the dash to actuate cleaning cycles as needed. With the fan positioned just behind the grille, coolers are less vulnerable to damage. Hinged grille opens wide for convenient clean-out. Suction fan is more efficient than blower designs, eliminating the need for oversize coolers. There's no need for a radiator screen to decrease tube erosion, either.

The J-Series' highly adaptable drivetrain makes them ideal for work with rear-mount attachments such as rippers and cable plows.

Forestry-protection packages and wastehandler configurations help these machines survive and thrive in tough applications.

# Built to do one job extremely well — yours.

Yours isn't just any business. Why settle for just any crawler? Choose a J-Series Dozer in standard, long-track, wide-track, wide-long track, and low ground-pressure configurations with inside-mounted PAT or outside-mounted straight or semi-U blades. What's

more, these highly productive and uniquely versatile machines can be equipped with a variety of special-duty and severe-application packages to help them thrive in a wide variety of work. And tackle tasks that other crawlers can't. Ask your dealer for details.

With optional Integrated Grade Control, wiring harnesses, sensor mounts, control valves, and monitor bracket are factory installed. So adding a Trimble®, TOPCON, or other electronic grade-control system is "plug-and-play" easy. Choose the blade that's best for your kind of work. Purpose-built mainframes allow optimized component placement — for uncompromised grading ability, regardless of which configuration you prefer.

## Uncover new ways to keep costs down.

Vertical filters allow quick, no-spill changes. Engine, hydraulics, and transmission utilize a common oil, further simplifying service.

Advanced in-cab monitor gives easyto-understand messages for quick and easy troubleshooting without special tools.

Operator station tilts a full 70 degrees in only minutes, for wide-open access to internal components. Unlike other crawlers, there's no need to disconnect linkages, hydraulics, or wiring.

Swing open their hinged doors and you'll uncover lots of the ways these crawlers help keep maintenance to a minimum. Same-side daily service points make quick work of the daily routine, and extended engine oil and

drivetrain service intervals let you work longer between changes. Other timesaving features include an easy-to-clean undercarriage, quick-to-replace hydraulic hoses, and designed-in diagnostics, to list just a few.

V	Distance Between Shanks 3 ft. 5 in. (1041 mm)

### 750J / 850J CRAWLER DOZERS

**Key:** ● Standard equipment ▲ Optional or special equipment

\*See your John Deere dealer for further information.

### 750J 850J **Engine**

Certified to EPA Tier 3 emissions

Certified to EPA Tier 3 and EU Stage IIIA emissions

Certified to EPA Tier 2 and EU Stage II emissions

Electronic control with automatic engine protection

Dual safety element dry-type air cleaner, evacuator valve

Muffler, self draining, under hood, with vertical stack

Environmental service drains Chrome exhaust

Ether start aid

Rotary ejector engine air precleaner

### Cooling

Cooling fan, suction type, programmable reversing

Engine coolant radiator (10 fins per in.)

Engine coolant radiator (6 fins per in.)

Hydrostatic cooler (oil/air – 10 fins per in.)

Hydrostatic cooler (oil/air - 6 fins per in.)

Hydraulic cooler (oil/air – 6 fins per in.)

Enclosed safety fan guard (conforms to SAE J1308 and ISO3457)

Perforated engine side shields

Split-hinge bar-type grille

Extreme-duty grille

### **Transmission**

Diagnostic test ports

Environmental service drains

Final-drive seal guards

### **Hydraulic System**

Two-function hydraulics

Three-function hydraulics

Four-function hydraulics with rear plumbing

High-flow hydraulic pump and hydraulic cooler for use with winch

Integrated Grade Control (IGC)

### Mainframe. Access Panels

Tilt operator station transmission access

Front tow loop (bolt-on)

Integral bottom protection

Hinged bottom access covers (bolt-on)

Vandal protection: Engine access door / Side tank access doors / Fuel

tank / Instrument panel / Transmission reservoir / Hydraulic reservoir

Maintenance-free center crossbar pivot

### 750J 850J Attachments

Retrieval hitch with pin

Extended rigid drawbar with pin for pull-type implements

Counterweight, rear, 720 lb. (327 kg)

Counterweight, rear, 1,000 lb. (454 kg)

Ripper, rear, three shank Winch, hydrostatically driven\*

Forestry screens\*

### Undercarriage

Oscillating undercarriage with remote lube

Full-length, smooth-surface track frame covers

Guides, front and rear, with bolt-on wear strips

Segmented sprockets

Double-flange rollers

Extended life undercarriage SC-2™ bushings

Full-length rock guards

### Canopy Cab Operator's Station / Electrical

Retractable seat belts, 3 in. (76 mm) (conforms to SAE J386)

Convex interior rearview mirror, 4-in. (102 mm) tall, 8-in. (203 mm) wide (conforms to SAE J985)

Power port, 12 volts

Second power port, 12 volts

Lockable dash-mounted storage compartment

Air conditioner, 24,000 Btu

Tinted glass

Dome light

Heater (roof mount)

Front and door wipers

Mechanical suspension vinyl seat

Mechanical suspension fabric seat

Air suspension vinyl seat

Air suspension fabric seat

Under-seat heater

Rear wiper, two speed

AM/FM, weather-band radio, clock

External-mounted attachment mirror

Sealed alternator, 55 amps

Master electrical disconnect switch

Lights, grille mounted (2), rear mounted (1)

Work lights (4), roof mounted

JDLink™ Ultimate wireless communication system

### CONTROL OWNING AND OPERATING COSTS

Customer Personal Service (CPS) is part of John Deere's proactive, fix-before-fail strategy on machine maintenance that will help control costs, increase profits, and reduce stress. Included in this comprehensive lineup of ongoing programs and services are:

Fluid analysis program - tells you what's going on inside all of your machine's major components so you'll know if there's a problem before you see a decline in performance. Fluid analysis is included in most extended coverage and preventivemaintenance agreements.

Component life-cycle data – gives you vital information on the projected life span of components and lets you make informed decisions on machine maintenance by telling you approximately how many hours of use you can expect from an engine, transmission, or hydraulic pump. This information can be used to preempt catastrophic downtime by servicing major components at about 80 percent of their life cycle.

Preventive Maintenance (PM) agreements - give you a fixed cost for maintaining a machine for a given period of time. They also help you avoid downtime

by ensuring that critical maintenance work gets done right and on schedule. Onsite preventive maintenance service performed where and when you need it helps protect you from the expense of catastrophic failures and lets you avoid wastedisposal hassles.

Extended coverage – gives you a fixed cost for machine repairs for a given period of time so you can effectively manage costs. Whether you work in a severeservice setting or just want to spread the risk of doing business, this is a great way to custom-fit coverage for your operation. And an extended coverage contract also travels well because it's backed by John Deere and is honored by all Deere construction dealers.

Customer Support Advisors (CSAs) - Deere believes the CSA program lends a personal quality to Customer Personal Service (CPS). Certified CSAs have the knowledge and skills for helping make important decisions on machine maintenance and repair. Their mission is to help you implement a plan that's right for your business and take the burden of machine maintenance off your shoulders.

Net engine power is with standard equipment including air cleaner, exhaust system, alternator, and Specifications and design subject to change without notice. Wherever applicable, specifications are cooling fan at test conditions per ISO9249. No derating is required up to 10,000-ft. (3050 m) altitude. Also available: winches, fair-leads, log arches, skidding grapples, trash packages, landfill protection packages, cable plows, side booms, field-installed cab for canopy, canopy heater, and fire suppres-

in accordance with SAE standards. Except where otherwise noted, these specifications are based on units with rollover protective structures, full fuel tanks, 175-lb. (79 kg) operators, and standard equipment; 750.L T unit with 22-in. (560 mm) moderate-duty grousers, rigid drawbar, and Semi-U (High-Production) blade; and 750.J WT and LGP units with 34-in. (865 mm) single-bar grousers and
