B18D 6x4 ARTICULATED DUMP TRUCK MK VII

- The exclusive on-board weighing option presents the operator with real time information on the payload while the machine is being loaded. A 'limp home' mode can also be activated if the machine is significantly over-loaded.

- The park brake automatically applies when neutral is selected and it is not possible to engage neutral at speed. Torque dependent park brake release (hill assist) ensures no roll back on slopes.

- The incorporation of a Pitch and Roll sensor in the vehicle allows the bin to not be operated if the truck is in an unsafe position.

- Full hand-rails can be installed to provide even more safety when performing engine checks.

- Keyless start, driver identity, and access codes ensures no unauthorized operation of your equipment.

- Both operator or site selectable maximum speed control allows the vehicle to automatically de-accelerate and apply the retarder to prevent onsite speeding.

- Reverse cameras are available for factory or on site fitment ensuring full view when reversing.

- Optional Tyre pressure - monitoring System ensures that the operator has real time information on all tyres pressure and temperature conditions.

- The best in class retarder and engine braking automatically applies when the operator lifts his foot off the accelerator. Retarder aggressiveness can be simply adjusted on the sealed switch module ensuring maximum descent control for all conditions.

- All trucks can be set up to automatically sound the horn when starting or switching between forward and reverse.
