## HYDRAULIC SYSTEM

The hydraulic system, named "Automatic Sensing Work Mode", is designed for high productivity, high digging capacity, high maneuvering precision and good fuel economy.

The summation system, boom priority, arm priority, swing priority, and regeneration system of the boom and arm flows are provided for the best operation.

**The following important functions are included in the system ;**

**Summation system:** providing full use of the pump oil flow.

**Boom priority:** gives priority to the boom operation for fast raising when loading or deep excavating.

**Arm priority:** gives priority to the arm operation for faster cycle times in leveling and for increased bucket filling when digging.

**Swing priority:** supplies priority to the swing operation for faster swing during simultaneous operations.

**Regeneration system:** enhances the cylinder life cycle to prevent cavitation and provides priority to other movements during simultaneous operations.

**Power boost:** All digging and lifting forces are increased.

**Holding valves:** Boom and arm holding valves are standard.

**Power Max:** All function speeds are increased.
